## What Is Special?

- Built-in Mechanical IR Filter Shift
  - >> Object remains in focus no matter day & night
  - >> True color performance
- Smart Light Control Software Design
  - >> Smart light control to avoid overexposure
- Special Large Aperture Lens(F1.4 / F1.2)
  - >> f6.0 / 8.0 / 12.0 Lens selectable
- Excellent ID Design
  - >> Optimal IR heat treatment solution
  - >> Lightning-proof

### Patent Mechanical IR Filter Shift

(to get true color and clear images):

In the daytime, "True Color" is presented because the camera receives the same visible light as human beings can see.

At night, "IR Filter Shift" control will allow the camera CCD to receive all the light for clearer images. With the help of the large aperture lens, the sensor sensitivity and image brightness are raised up.

Conventional

Color shift

AVM Series

True color

### Smart Light Control

(Dynamic adjustment for clear and accurate image):

"CDS" and "Image Comparison Software" are both used to adjust the brightness of IR LEDs for better IR LED controlling. One object can be seen clearly without overexposure even if it is close to the camera.

Conventional

Overexposure

AVM Series

Clear image

### Large Aperture Lens

( F1.4 / F1.2 lens can get colorful image under low illumination):

The amount of light passing through the lens for IRpro cameras is more than other IR cameras. Therefore, IR LEDs do not need to be always on for night surveillance. It helps to reduce the power consumption, and extend the lifetime of IRpro cameras.

### Longer IR Effective Distance

Different IR projection angles are available based on the aperture lens you use.
