MEKO

Il bello dell'affidabilità

Proteco is renovating its range in the automations for sliding gate and is introducing **MEKO** the new motor which is blending the well known and tested mechanics of Mover with an elegant and renovated design, with grey satinized colour.

Its thin and compact size allow Meko to suit pleasantly the aesthetics of new and modern gate.

NOT JUST DESIGN

MEKO, as all the motors Proteco, is entirely designed, built and assembled in Italy and is presenting some technical innovations:

- A new release system with personalized key for a rapid and quick release.
- The previous 12 teeth pinion has been changed with a new 15 teeth pinion that is allowing a faster movement of the gate (from 8,5 m/sec to 10,5 m/sec for the 230V versions)
- A new board holder, wide and easily accessible on which the control boards of the Proteco range can be fixed
- MEKO is preset also for the connection with a release system from the outside; you can purchase separately the kit for release from the outside in case of power outages

The motors of the MEKO range are present in different power supply in order to meet the needs of the different markets:

MEKO 5 e MEKO 8 are the motors powered with 230V or 110V power supplies for gates till 500 and 800 Kg (control board Q60SR)

MEKO 4 is the version planned for 24V power supply for gates weighting till 450 Kg (control board Q26)

MEKO 4 can be also powered by a solar panel and can keep inside 2 back up batteries 12V 1,2Ah for the emergency operations in case of power failures.

Meko is available as from the month of October
