

Gas Detectors

Satel®

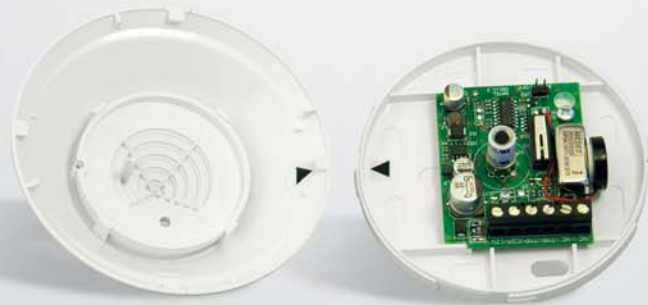

DG-1 series gas detectors are used for early detection and indication of exceeding specific gas threshold concentration. The line consists four detectors intended for carbon monoxide, liquified petroleum gas, methane and trichloromethane based narcotic gas detection.

DG-1

DG-1

- detection of carbon monoxide (DG-1 CO), liquified petroleum gas (DG-1 LPG), methane (DG-1 ME) and trichloromethane based narcotic gases (DG-1 TCM)
- optical and acoustical indication of exceeding threshold gas concentration
- digital signal analysis
- full autodiagnosics
- low current consumption
- support for standalone operation mode
- pre-alarm feature for DG-1 LPG and DG-1 ME
- tested and calibrated in a reference gas atmosphere

DG-1 CO

DG-1 LPG

DG-1 ME

DG-1 TCM
