Software Revision Notes

Version 4.2

Revision Notes

Software Version 4.2   2006-4-28

- TCP/IP configuration is added to **Communication Setup** dialog.

- Security level is displayed in user list.

- **Admin** tab is renamed **User Level**. You can set security level of a user in addition to administration level.

- **Custom Field** section is added to **Log** window.

- Online HTML help is updated to Packet Protocol V2.6.

- The following bugs are fixed.

    - File Save As dialog is opened as File Open dialog.

    - With V1.6 firmware, some menus are disabled wrongly.

Software Version 4.1   2005-11-18

- Multiple templates can be selected for **Verify Host** and **Enroll Template** command.

- **Template** tab is added to **Main** window. In that window, users can scan/read/delete templates.

- **Reset** is added to **Misc** window.

- **Watchdog** parameter is added to **System** window.

- Online HTML help is updated to Packet Protocol V2.5.

- The following bugs are fixed.

    - **Scan Image** does not work in firmware older than V1.3 in SFM 3000 series modules.

    - In some cases, the communication parameters are not updated even though

Search found them successfully in **Communication Setup** dialog.

■ If the module is in network mode, **Receive Only Mode** does not work.

■ In rare occasions, **Calibrate** and **Delete All** fail due to short timeout settings.

■ **Set Status** in **I/O** window sends inverted signal to the module.

■ The program does not work correctly in Windows 98/Me.

■ User ID larger than 2G is displayed as a minus integer.

Software Version 4.0   2005-09-23
