Safety precautions

 The list below is to keep user's safety and prevent any loss. Please read carefully before use.

Do not install the device in a place subject to direct sun light, humidity, dust or soot.

Do not place a magnet near the pr oduct. Magnetic objects such as magnet, CRT, TV, monitor or spe aker may damage the device.

Do not place the device next to heating equipments.

Be careful not to let liquid like water, drinks or chemicals leak inside the device.

Clean the device often to remove dust on it.

In cleaning, do not splash water on the device but wipe it out with smooth cloth or towel.

3

Safety precautions

The list below is to keep user's safety and prevent any loss. Please read carefully before use.

Do not drop the device.

Do not damage the device.

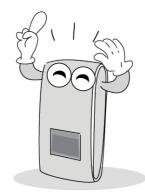

Do not disassemble, repair or alter the device.

Do not let children touch the device without supervision.

Do not use the device for any other purpose than specified.

Contact your nearest dealer in case of a trouble or problem.

4

Basics of fingerprint recognition

What is fingerprint recognition?

- Fingerprint is an individual's own biometric information and does not change throughout his/her life. Fingerprint recognition is a technology that verifies or identifies an individual using such fingerprint information.
- Free from the risk of theft or loss, fingerprint recognition technology is being widely used in security systems replacing PIN or cards.

Process of fingerprint recognition

- Fingerprint consists of ridges and valleys. Ridge is a flow of protruding skin in a fingerprint while valley is a hollow between two ridges. Each individual has different pattern of ridges and valleys and finger recognition makes use of such originality and uniqueness of these patterns.
- Fingerprint sensor generates 2-dimentional fingerprint image using different technology. According to the sensing technology, fingerprint sensors are classified into optical, capacitive, or thermal.
- Fingerprint template is a collection of numeric data representing the features of a fingerprint. Fingerprint templates are saved inside the memory of BioStation and used for identification.

Secure way to protect personal information

To avoid privacy concern, Suprema's fingerprint products do not save fingerprint images itself. It is
impossible to reconstruct a fingerprint image from a fingerprint template which is just numeric data
of the features of a fingerprint.

How to place a finger

Suprema's fingerprint products show an outstanding recognition performance regardless of the user's fingerprint skin condition or the way of fingerprint positioning. However, following tips are recommended to get more optimal fingerprint recognition performance.

Select a finger to enroll

- It is recommended to use an index finger or a middle finger.
- Thumb, ring or little finger is relatively more difficult to place in a correct position.

How to place a finger on a sensor

- Place a finger such that it completely covers the sensor area with maximum contact.
- Place core part of a fingerprint to the center of a sensor.
 - People tend to place upper part of a finger.
 - The core of a fingerprint is a center where the spiral of ridges is dense.
 - Usually core of fingerprint is the opposite side of the lower part of a nail.
 - Place a finger such that the bottom end of a nail is located at the center of a sensor.
- If a finger is placed as in the right picture, only a small area of a finger is captured. So it is recommended to place a finger as shown in the left picture.

How to place a finger

Tips for different fingerprint conditions

- Suprema's fingerprint products are designed to scan fingerprint smoothly regardless of the conditions of a finger skin. However, in case a fingerprint is not read well on the sensor, please refer to the followings tips.
 - If a finger is stained with sweat or water, scan after wiping moisture off.
 - If a finger is covered with dust or impurities, scan after wiping them off.
 - If a finger is way too dry, place after blowing warm breath on the finger tip.

Tips for fingerprint enrollment

- In fingerprint recognition, enrollment process is very important. When enrolling a fingerprint, please try to place a finger correctly with care.
- In case of low acceptance ratio, the following actions are recommended.
 - Delete the enrolled fingerprint and re-enroll the finger.
 - Enroll the same fingerprint additionally.
 - Try another finger if a finger is not easy to enroll due to scar or worn-out.
- For the case when an enrolled fingerprint cannot be used due to injury or holding a baggage, it is recommended to enroll more than two fingers per user.

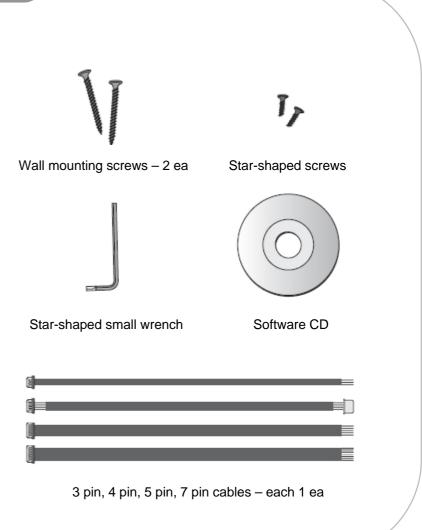

Product Contents

Basic Contents

Product Contents

Optional accessories

Secure I/O

12V power adaptor

Plastic stand

USB fingerprint scanner for enrollment on PC

Front

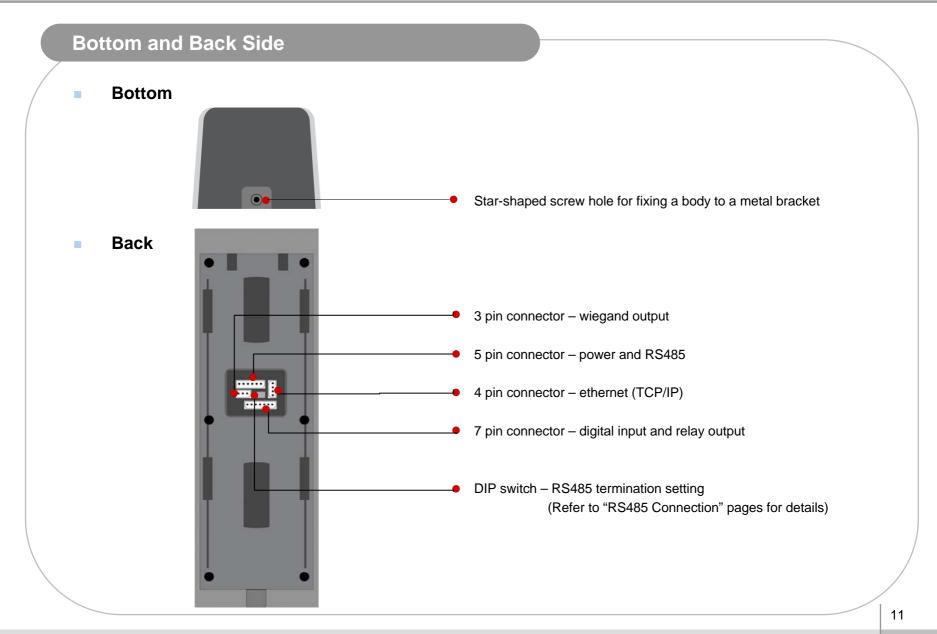

RF card reading part Place an RF card over the picture

LED
 Display current status using seven different colors

Fingerprint sensing part Place a finger on a sensor surface

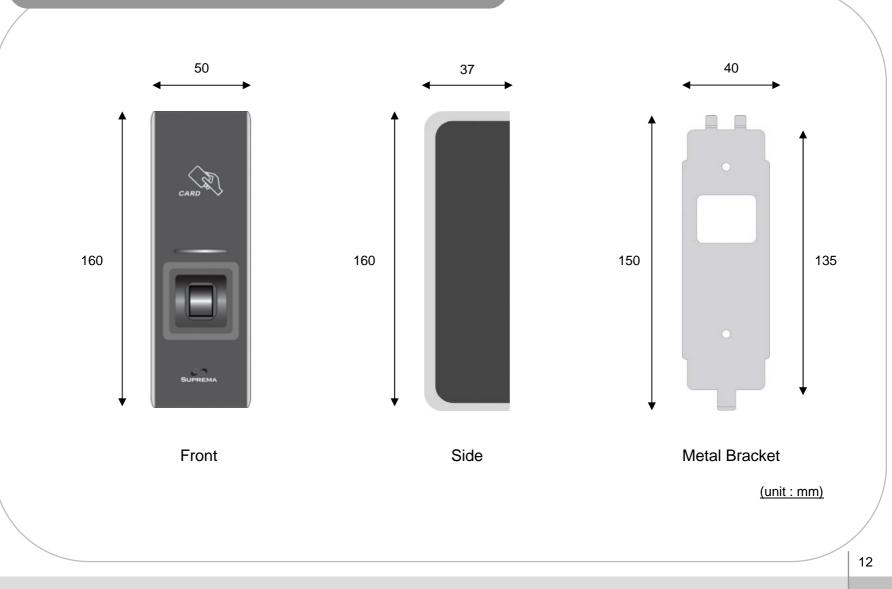

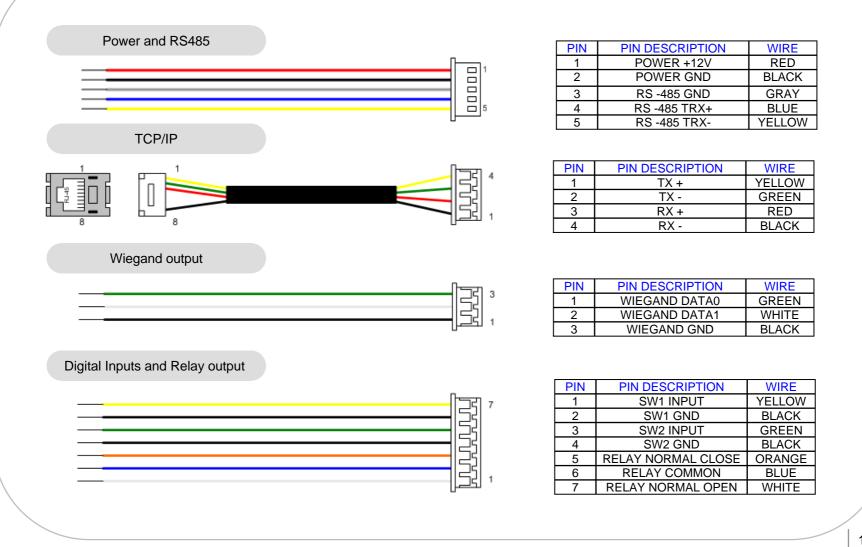

Product Dimension

Cables and Connectors

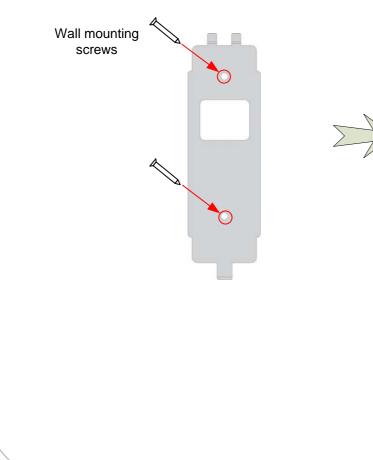

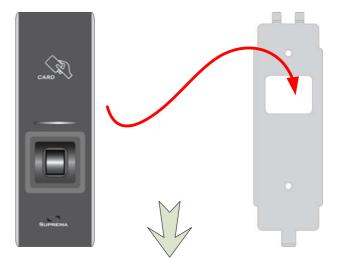

Installation of Wall-mount Bracket

 Fix wall mount bracket on a wall using wall mounting screws

Hook BioEntry Plus on the wall mount bracket

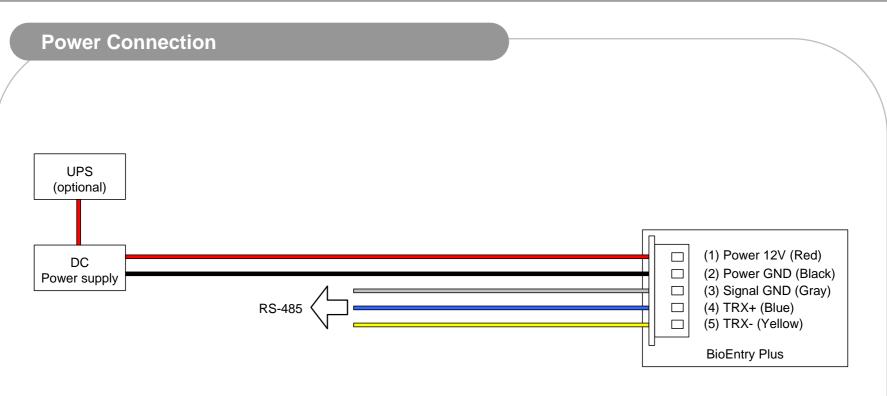

Fix BioStation and wall mounting bracket using a star shape screw.

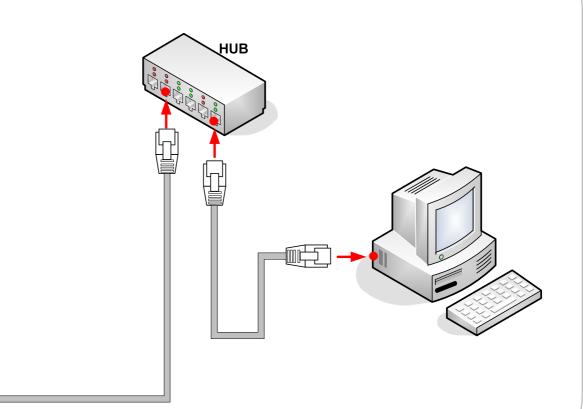

- Recommended power supply
 - \bullet 12V \pm 10%, at least 500mA.
 - Comply with standard IEC/EN 60950-1.
 - To share the power with other devices, use a power supply with higher current ratings.

Ethernet Connection

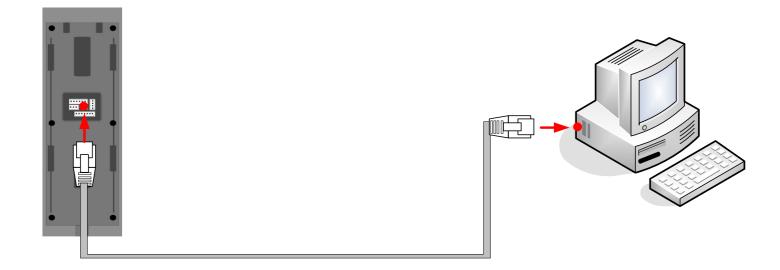

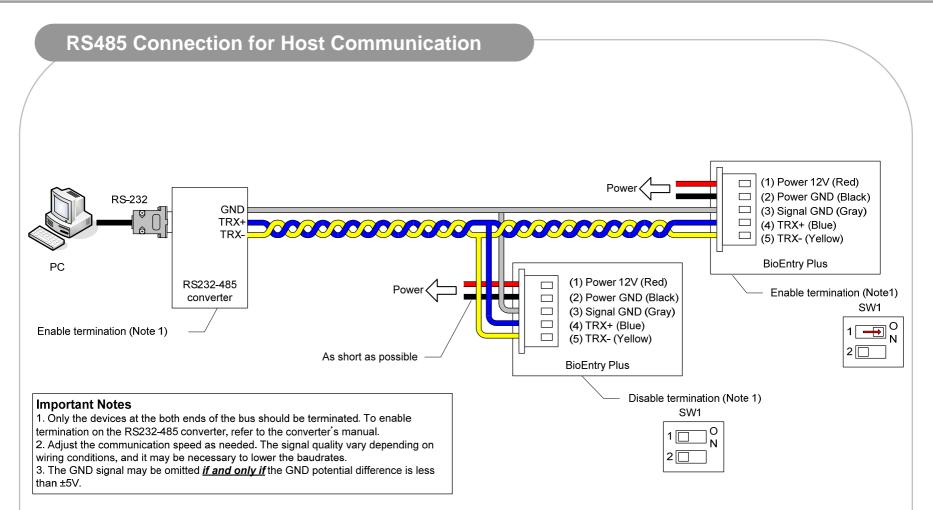

Ethernet Connection (Direct connection with PC)

To connect BioEntry Plus with a PC directly, connect both devices with a straight CAT-5 cable. As the BioEntry Plus supports auto MDI/MDIX feature, it is not necessary to use a crossover type cable.

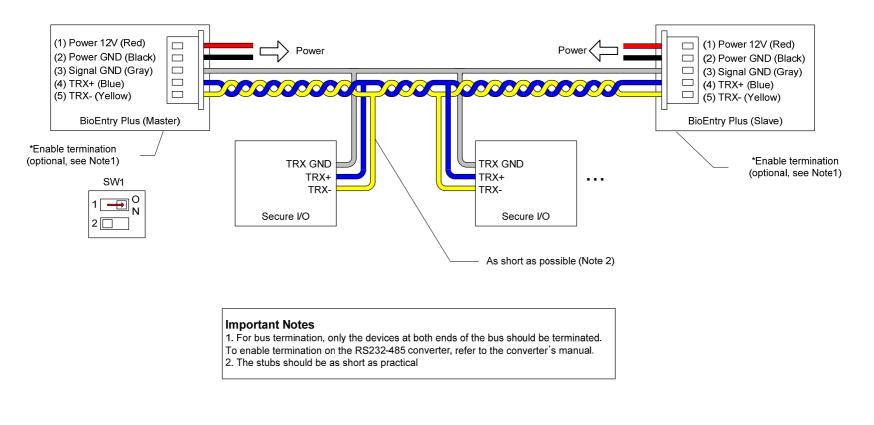

RS485 Connection for Secure I/O

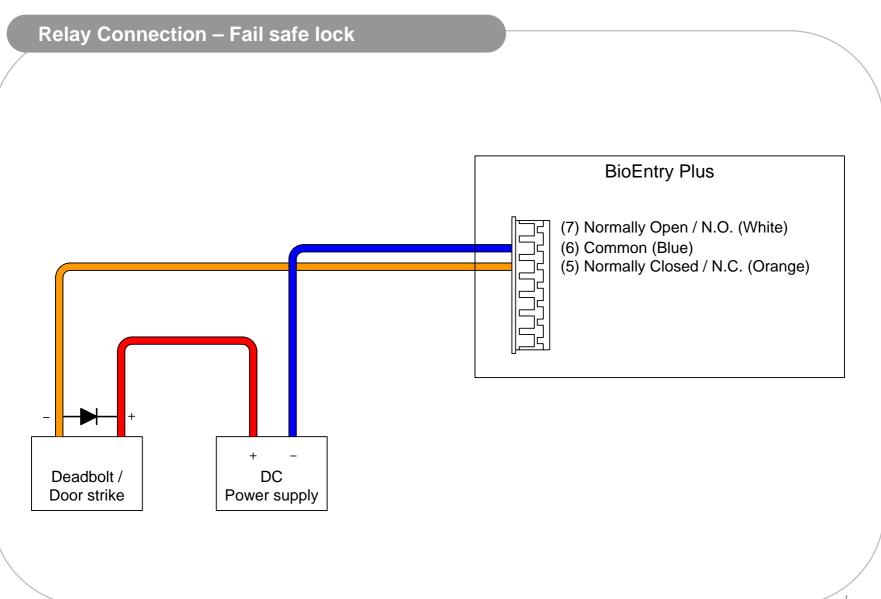

Max number of devices

• Maximum numbers of devices in an RS485 loop are two(2) devices (BioStation or BioEntry Plus) and four(4) Secure I/Os

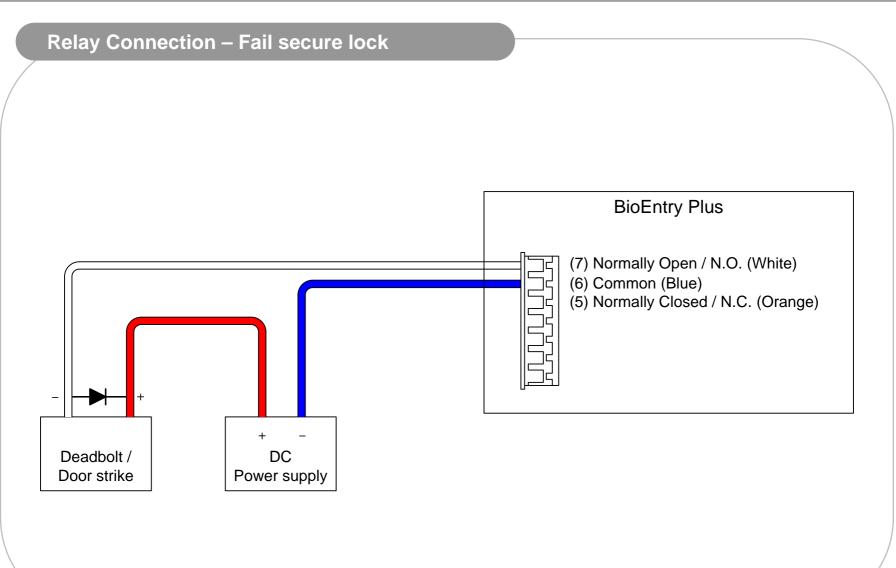

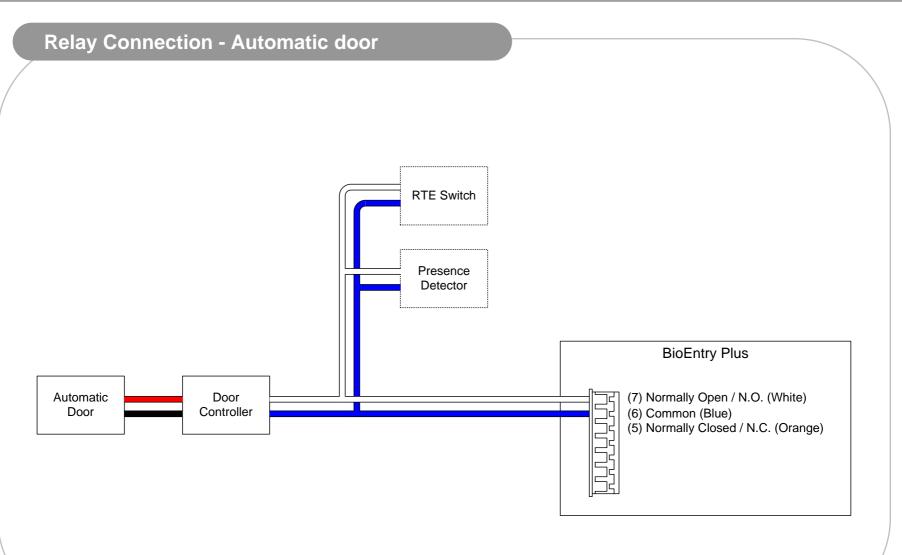

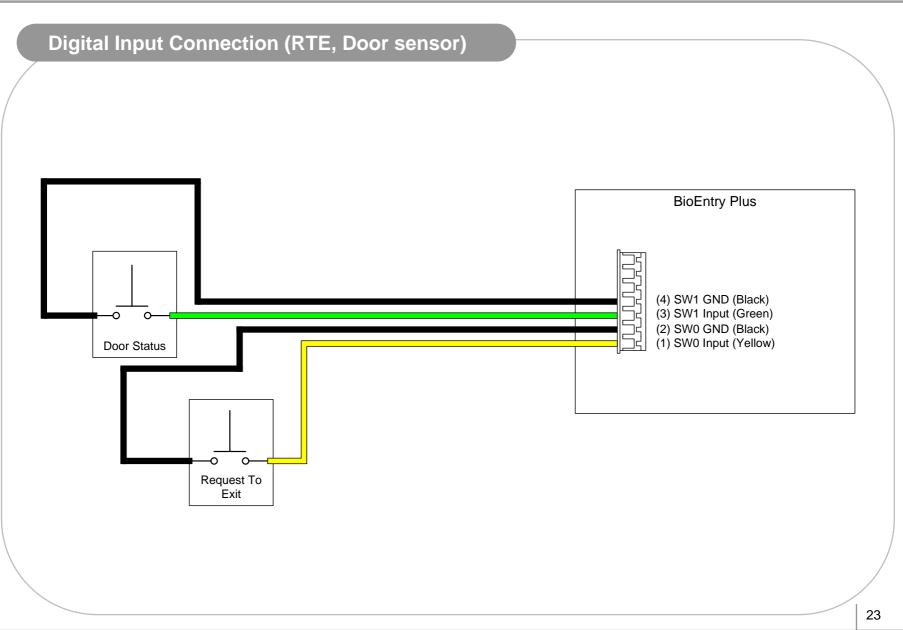

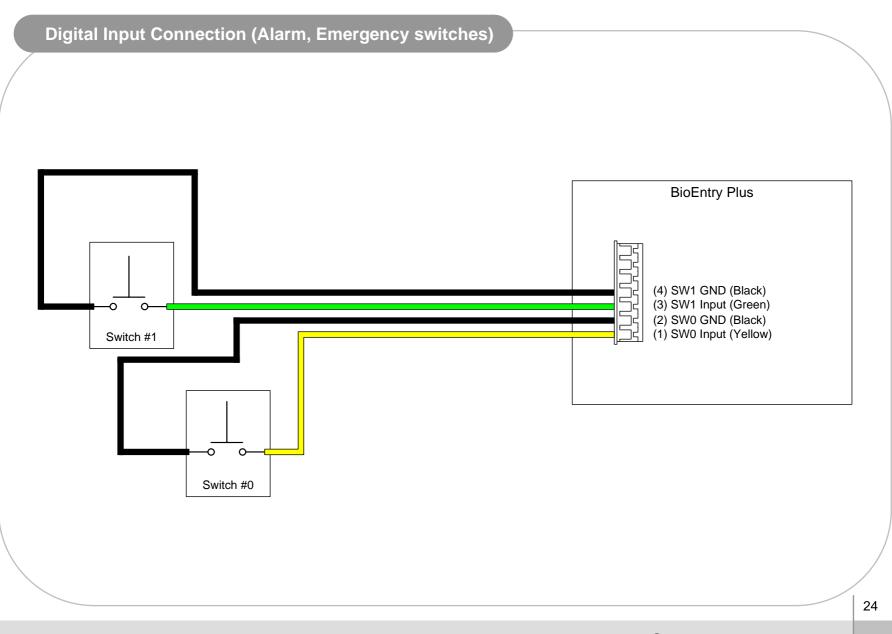

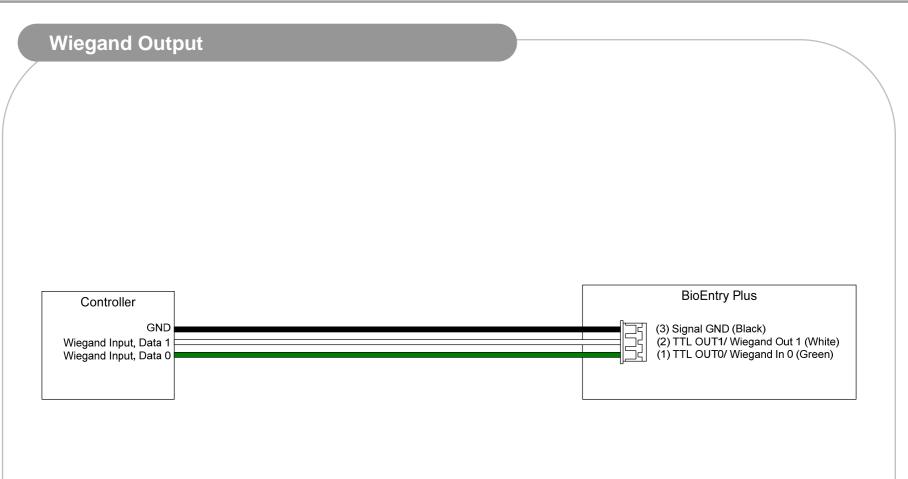

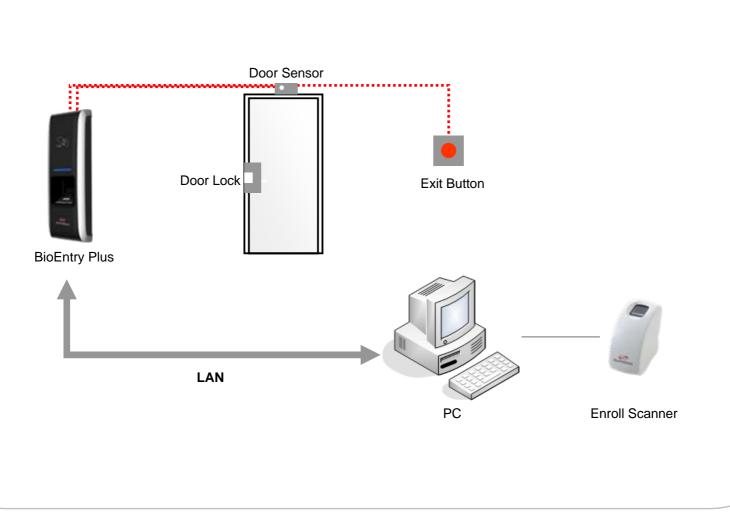

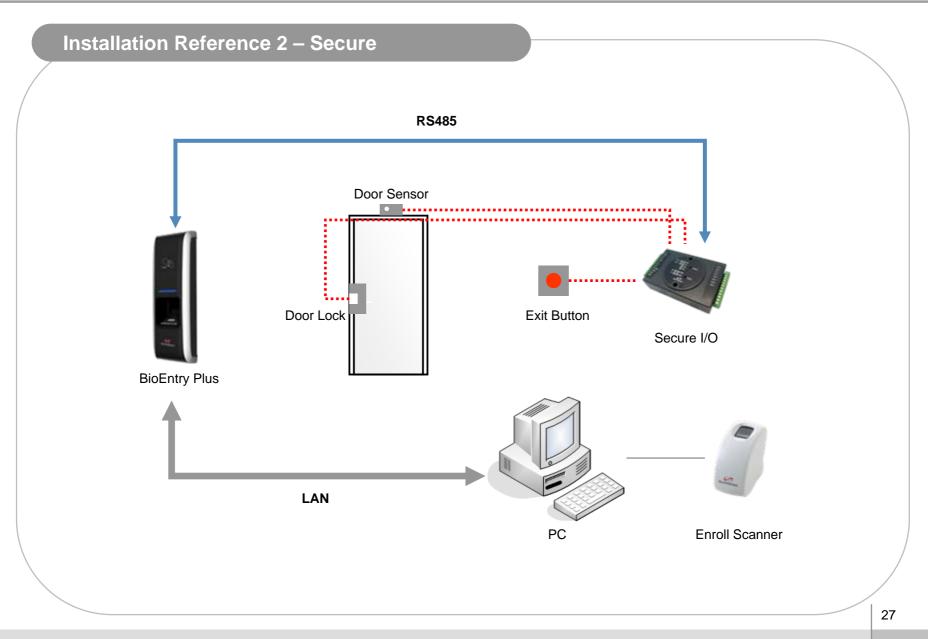

Installation Reference 1 - Stand alone

26

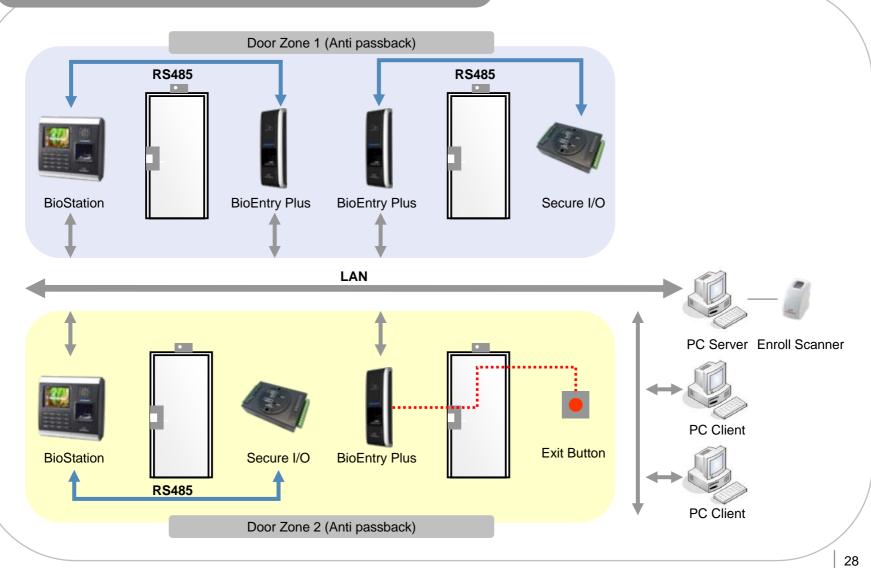

Installation Reference 3 – Network

Electrical Specification

	Min.	Тур.	Max.	Notes
Power				
Voltage (V)	10.8	12	13.2	Use regulated DC power adaptor only
Current (mA)	-		250	
Switch Input				
V _{IH} (V)	-	TBD	-	
V _{IL} (V)	-	TBD		
Pull-up resistance (Ω)	-	4.7k	-	The input ports are pulled up with 4.7k resistors
TTL/Wiegand Output				
V _{OH} (V)	-	5	-	
V _{oL} (V)	-	0.8	-	
Pull-up resistance (Ω)	-	4.7k	-	The outputs ports are open drain type, pulled up with 4.7k resistors internally
Relay				
Switching capacity (A)	-	-	1 0.3	30V DC 125V AC
Switching power (resistive)	-	-	30W 37.5VA	DC AC
Switching voltage (V)	-	-	110 125	DC AC

Troubleshooting

Fingerprint can not be read well or it takes too long.

- Check whether a finger or fingerprint sensor is stained with sweat, water, or dust
- Retry after wiping off finger and fingerprint sensor with dry towel.
- If a fingerprint is way too dry, blow on the finger and retry.

Fingerprint is entered but authorization keeps failing.

- Check whether the user is restricted by door zone or time zone.
- Inquire of administrator whether the enrolled fingerprint has been deleted frin the device for some reason.

Authorized but door is not opened.

- Check whether the time is set as lock time.
- Check whether an antipass back mode is in use. In antipass back mode, only who entered can exit.

Device doesn't operate though power is connected.

• Check whether a device and a bracket is well connected to each other. If not, a tamper switch is activated and the device doesn't work.

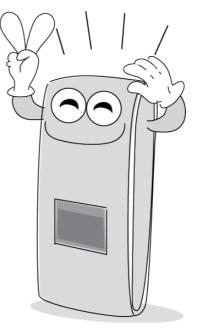

Device cleaning

- Wipe out machine surface with dry towel or cloth.
- In case there is dust or impurities on the sensor of the BioStation, wipe off the surface with dry towel.
- Note that if the sensor is cleaned by detergent, benzene or thinner, surface is damaged and fingerprint can't be entered.
