garage and sectional

LIVI 500

The ideal solution for any type of swing gates regardless of column dimension. Safe, fast to install and extremely reliable

4 ways to spell reliability

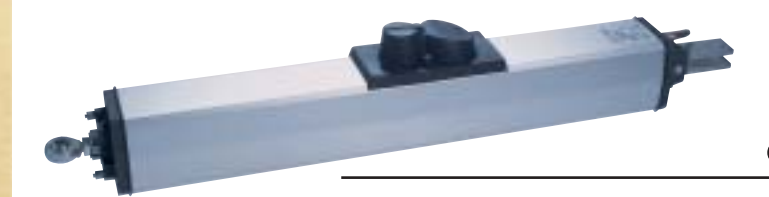

GHOST 200

The underground automation is the tidiest solution for swing gates. Great strength and power: and all of it is invisible, so the gate shape is intact

WING 302

This efficient and reliable linear ram demands no recurring maintenance nor internal adjustments. The ideal solution for residential swing gates.

OLI 600

Top material, compact structure and adjustable torque make this hydraulic linear ram the ideal automation for swing gates for industrial or intensive residential use.

LIVI 400

The gate automation for sliding gates up to 400 kg or 800 kg which is safe, elegant and powerful.

strength

GULLIVER 1500

A very strong, sturdy gate automation of limited size operating with sliding gates up to 1500 kg or 2200 kg. The best choice for intensive and/or industrial use.

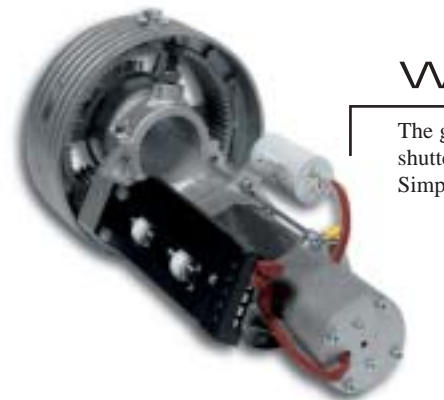

sturdiness

PASS/STOP

Top materials and care for details are the main features of DEA wide range of barriers. The best choice for intensive use (STOP) or residential use (PASS)

versatility

WILL

The gate operator designed for roller shutters up to 150 kg of balanced weight. Simple to install and to use.

roller shutters

safety and comfort

LIVI 900

Reliability and safety are the key features of this counterweight overhead door operator

EASY 700

Sectional and spring garage doors operators that can work also with counterweight doors. Simple and easy to install.

easy to operate

LIVI 800C

DEA introduces this easy-to-use, efficient and durable gate automation for sectional industrial doors.
